

Sorting tables in a citrus packhouse

## Sorting tables

The roller sorting tables make the fruit rotate for a better visualization of its whole surface allowing a good sorting personnel inspection and separation of certain classes.

Rollers can be PVC or metallic rollers with different options like stainless steel, aluminium or others.

Catwalks with stairs are designed to be able to access any point of the line in a easiest and most comfortable way. They are manufactured of non-slip aluminium floor and comply with the current design, ergonomics and safety regulations.

### FEATURES & BENEFITS

- Possibility of dividing the fruit flow in several sorting sections so that the operator sees less quantity of fruit, allowing a better visualization and selection. Variable speeds.
- Side railings made of stainless steel.
- The selected fruit will be sent, depending on their category, to another machine through chutes and belt conveyors.
- Highest quality standards to ensure long durability.

## KEY SPECIFICATIONS

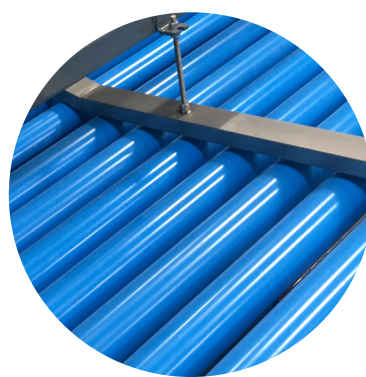

- Designed to comply with the Machine Directive of the European Union (CE) 2006/42/CE
- Maximum capacity: check according to the machine width and length.
- Maximum speed recommended for fruit selection: 100 r.p.m

## OPTIONS

- Widths available (mm):  
From 400 to 2000 (100 intervals)
- Accesories:  
Chutes/ bottom belt/ top belt /  
ultraviolet light cabinet/  
dividing railings / catwalks/  
stairs
- Various predefined models according to the production required by the customer and custom designs on request.

## TECHNICAL INFORMATION

- Power: 3 phases - 380 V - 50 Hz
- Power consumption: check.
